To
Army Corps of Engineers
Washington State Dept of Ecology
& Cowlitz County

I urge you to examine the impact this project has on people & the environment.
Specifically, the Corps has spent billions of dollars to protect endangered salmon & steelhead.

Therefore the Corps needs to use a ~~broad scope for the~~ comprehensive EIS in order to protect the investment that you have already made to protect these fish

Because coal dust is so toxic & because the Columbia River Gorge has an average wind speed of 25 mph, shipping coal by rail to Longview would be catastrophic for the recovery of these endangered salmon & steelhead

May you have the courage of your mission to protect the citizens of the United States. Sincerely,

Blaine Ackley 655 NW 229th Ave.
Hillsboro, OR 97124
