If people that are so against the burning & transportation of coal are actually concerned about the environment, then they shouldn't support "renewable" energy sources like wind & solar. Why?

1) Both wind turbines & solar panels are made with steel. Steel production requires coal.

2) The rare earth metals required to make solar panels & wind turbines can be 3x more rare than gold. (Not sustainable) Mining rare earth metals has a huge impact on the earth. (additional space is provided on the back)

(comment continued)

So, in a nutshell, environmental concerns about extracting, transporting, & burning coal are all really hypocritical when anti-coal groups advocate the use of unsustainable, unreliable, environmentally hazardous forms of energy like solar & wind.

I Support the Millennium Bulk Terminal project!
