I am opposed to the huge coal terminal for several reasons: The long coal trains will cause traffic + rail problems. The bridge will be closed several times a day. The train tracks go near The Highlands, a low income housing district. These people don't have the option of moving. The "Carol" of 130 jobs will not be for them.

Pollution - air + water. During the winter we have very strong winds. No matter what the company says, they can't eliminate coal dust. This poison dust will cause

(additional space is provided on the back)

(comment continued)

air pollution - especially dangerous for asthmatics. Cars, houses, buildings will be covered with coal dust. When it rains, the run-off from the coal will go into the river, endangering ~~the~~ fish. It will turn the beautiful Columbia River into a "dead zone."

The EIS needs to consider this site as well as the mining site, the areas where the trucks go, the diesel emissions crossing the ocean, and finally the impact of coal burning in China. These all add to Climate Change that need to be assessed.

Carol A. Kressel
