This coal export facility is under consideration at a critical time for ~~our~~ the world's ability to slow climate change. Coal is the dirtiest fuel - most CO₂ per Btu - in use in the world. The United States is beginning right now to show leadership by proposing (EPA) rules for carbon emissions from new coal power plants. These rules should stop any new coal plants from being built. The States of Washington and Oregon have just negotiated an end to coal burning at the two power plants in these states currently burning coal. I know that it will be challenging for you to

(additional space is provided on the back)

consider carbon emissions from burning this coal and its impact on carbon change.

As we move forward in our attempt to save our planet we will soon stop mining coal in the United States. The world will only be able to protect ourselves from climate change by leaving all coal in the ground. In its leadership role the United States needs to take bold steps to keep Montana and Wyoming coal in the ground. Stopping coal exports — a business reaction to ~~the~~ coal plants shutting down here — is a step that our environmental leaders can easily take right now
