Coal train issues with air quality are coal dust. Mines and railroads have addressed this issue with the use of top load sealant. This securing of the coal loads also address natural environment concerns. The number of ~~coal~~ trains is also greatly exaggerated and will not exceed previous levels. Many of the issues brought up by the environmental groups can be solved by advances in technology. Powder basin coal is also low sulfur, Asian markets will be buying coal regardless. Our coal is the best in speaking of ~~low~~ emission levels.
