No argument that Coal energy is the dirtiest known to man.

The mining, transportation & burning of coal is the least effective, most detrimental to people & the planet.

People in China cannot breathe, have to live in a bubble (when they can afford it) & are already looking for cleaner energy. To follow a coal train for miles is to smell it.

(additional space is provided on the back)

which means one is breathing it -

Pollution, traffic Congestion + Car accidents
leading to death is & has been a horrible
result of over-loading the rails.

Just one instance of emergency vehicles
prevented from getting through will
bring dire results.

The coal industry is dishonest -
they lie about the amount they would
ship -

The people don't want this shipments
to happen -!
