NO COAL EXPORTS FROM NORTHWEST PORTS

Dear U.S. Army Corps of Engineers, WA Department of Ecology, and Cowlitz County:

I strongly oppose the construction of a coal export terminal at Longview, WA which would transport coal on trains and ships throughout the Northwest. This proposal would negatively affect my community by increasing congestion and noise with more coal train traffic, polluting our air and local waterways, harming existing businesses, and delaying emergency responders. It would also damage aquatic ecosystems and fishing areas on the Columbia River, increase tanker traffic and the potential for shipping accidents and spills, expand strip-mining in Wyoming and Montana, and escalate climate change. I urge you to consider these impacts in the scope of the Environmental Impact Statement.

Please print clearly

NO COAL EXPORTS FROM NORTHWEST PORTS

Dear Governor Jay Inslee, Army Corps of Engineers, and Senators Cantwell and Murray:

Currently, there are four proposed coal terminals in Washington and Oregon that would export millions of tons of coal through our communities. I am concerned about the local impacts to my community from dirty coal, as described by the EPA, but also to the effect on our region as a whole. Given the significant impacts to air, water, climate, human health, business and our communities, an Environmental Impact Statement *must* be prepared for each individual project. And the federal agencies involved should conduct an in-depth area-wide environmental review that considers impacts from all projects from mine to power plant, *prior* to any permits being issued.

NO COAL EXPORTS FROM NORTHWEST PORTS

Dear Governor Jay Inslee, Army Corps of Engineers, and Senators Cantwell and Murray:

Currently, there are four proposed coal terminals in Washington and Oregon that would export millions of tons of coal through our communities. I am concerned about the local impacts to my community from dirty coal, as described by the EPA, but also to the effect on our region as a whole. Given the significant impacts to air, water, climate, human health, business and our communities, an Environmental Impact Statement *must* be prepared for each individual project. And the federal agencies involved should conduct an in-depth area-wide environmental review that considers impacts from all projects from mine to power plant, *prior* to any permits being issued.
